USG REPORT OF ABDOMEN AND PELVIS

Findings:

Liver: Liver is normal in size measuring 12.1 cm (cranio-caudal), regular in outline and homogenous parenchymal echotexture. No focal lesion seen. Portal vein is normal in caliber. Hepatic veins are normal. Intrahepatic bile ducts are not dilated.

Gall Bladder: Distended GB with multiple calculi are noted, largest one measuring 20 mm at GB neck. Minimal sludge is noted.

Common bile duct: Normal in caliber (4.1 mm). Lumen is echo free.

Pancreas: Visualized part is normal in size, outline and homogenous parenchymal echotexture. No SOL seen. Pancreatic duct is not dilated.

Spleen: Normal in size measuring 9.7 cm in long axis. Homogenous echotexture. No SOL seen.

Kidneys: Right - 9.0 cm

Left - 9.9 cm

Both kidneys are normal in size, outline and echotexture. Corticomedullary differentiation is maintained. No SOL or calculus seen. No hydronephrosis noted.

No free fluid or enlarged lymph nodes seen in the abdomen.

Urinary bladder: Urinary bladder is normal in outline, distensibility and wall thickness. No focal lesion or calculus seen.

Uterus: Anteverted, and measuring 7.0 x 2.5 x 4.0 cm. Outline is regular. Normal endometrial echocomplex. Endometrial thickness measures 4.0 mm. No SOL.

B/L Adnexa: Unremarkable.

No free fluid is noted in POD.

IMPRESSION:

- Distended GB with multiple cholelithiasis and minimal sludge
- Rest normal scan

DISCHARGE SUMMARY

Hospital number: 220208735
Patient's Name: Angel Thapa
Age/sex: 18 years/ Female
Address: Kapan, Kathmandu

IP No: 2036613
Date of Admission: 2025/12/04
Date of Discharge: 2025/12/07
Discharge Type: Normal
Primary Consultant: Dr Anuj Parajuli /Dr Dibesh Shrestha

Final diagnosis:

1. Acute Calculus Cholecystitis

History:

Chief Complaints:

Abdominal pain since 2 days

Vomiting 1 episode

HOPI and treatment history:

According to the patient, she was apparently well 2 days back when she developed abdominal pain, insidious in onset, non-progressive, more over right upper quadrant, radiating to back, aggravated by food intake, relieved on empty stomach. She also complained of 1 episode of vomiting, non projectile, non blood stained, non bile stained. It was associated with loose stool. No H/O SOB, Chest pain, headache, LOC, yellowish discoloration, cough, burning micturition. Normal bowel and bladder habit.

Past History:

No significant past history

Personal/Social History: Non-Vegetarian, Non- smoker, non alcoholic

Allergies: Not known till date.

Assessment during admission:

Neurological	GCS:15/15 (E4V5M6) Grossly intact
Respiratory	RR- 18/min SpO2- 98% in RA B/L NVBS
CVS	HR: 74 breaths/min BP: 110/70 mmHg S1S2M0
GI	Soft, non-distended, tender in epigastric region and right upper quadrant, Murphy sign negative, bowel sound present

Investigation:

Attached herewith

Course in Hospital:

Patient was admitted from ER with above mentioned diagnosis and clinical findings. Relevant investigations were sent. Vitals and I/O monitored. She underwent Laparoscopic Cholecystectomy 2025/12/04. Postoperatively, she was managed with IV fluids, IV antibiotics, analgesics, PPI. IV medications changed to oral forms, diet normalized as tolerated. Mobilization and incentive spirometry done. Dressing done. She is symptomatically better so is being discharged. She is hemodynamically stable at the time of discharge.

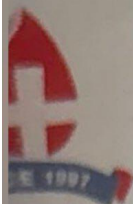

OT NOTE:

Date: 2025/12/04

Operative procedure: Laparoscopic Cholecystectomy

Findings:

- Liver: Grossly Normal
- GB: tense, inflamed, mucocele present with single calculus
- CBD: Normal

HAMS HOSPITAL
